Amigo Mobility International sold the first motorized shopping cart in 1970 just two years after Amigo was founded. It was in 1968 when Al Thieme invented the first three-wheel personal mobility vehicle for a person living with multiple sclerosis.

With our roots planted in healthcare, finding quality solutions for mobility needs has become our passion. We have over half a century’s worth of experience in designing and manufacturing products that serve others, and our pace of innovation continues to accelerate.

From the creation of a single healthcare unit, Amigo has grown to include a robust grocery and retail division and is now expanding into material handling. Moving more is our business, and our mission continues to be *Improving Lives Through Mobility*®.
“Wow” isn’t an expression you might expect when talking about motorized shopping carts, but we’ve heard it. You lift the ValueShopper seat to see the inner workings of one of the world’s most popular models and you get it. The front drive motor has modular components that keep things simple and sensible – only replace the parts you need, not the whole motor.

A front drive motor features a tight turning radius so shoppers can navigate aisles with ease.

Match your ValueShoppers to your decor:
ValueShopper XL

So hefty! Who doesn’t appreciate the deals buying in bulk provide? Know any people with limited mobility that know the value of stocking up? So do we, and the ValueShopper XL can accommodate large merchandise. With double the basket weight capacity, and extra casters to support the basket, we found a solution for wholesalers and bulk retailers.

All Amigo Shoppers feature durable steel platforms.

Coordinate with your color scheme too:

Extra large basket
If your location has ramps or inclines, a rear drive motorized cart may be the right solution. A rear drive motor provides increased power. SmartShopper has a different look, too. Some retailers prefer this design for its looks.

This one-size-fits-all cart provides a first-class experience for your guests.

Amigo motorized shopping carts offer up to 20 hours continuous run time.

Choose either of these two color options:
Wheelchairs are for hospitals. SmartChair is for retail stores.

Our engineers saw the need – a more comfortable shopping experience had to be created. SmartChair is a manual shopping chair that sits higher than a traditional wheelchair, has flip-up arms that allow for easy transfer, and is theft resistant because it doesn’t fold.

SmartChair also features an effortless automatic braking system. Let go of the handle, and the chair stops immediately.

Never replace foot plates again. The all steel platform provides a better solution.
We understand you only have so much front-end space. We respect this, and came up with SmartChair XT to be the one chair to meet many needs. From small children with disabilities to senior citizens, this chair was designed to be forward-facing to help make shopping experiences more comfortable.

This multi-use chair has a five-point harness and retractable seat belt. Use either or both as needed. It also features a higher back for additional support.
Accommodate customers with mobility needs with a traditional shopping wheelchair. Our traditional shopping wheelchair is a low-cost option, and is offered with or without a basket.

Wheelchairs are available in three widths:
- 20 inch / 51 cm
- 22 inch / 56 cm
- 24 inch / 61 cm
We’ve all seen the headlines: “Woman claims aching feet reason for stealing scooter,” “Man allegedly drove motorized cart to hospital to watch TV,” and more. Hold the presses with our theft prevention system! You control how far your Amigo motorized shopping carts can travel.

SmartTrack is an innovative solution to cart theft. It’s a small sensor programmed with your store’s GPS coordinates. Travel outside the first boundary and the cart beeps to alert the customer. Travel outside the second boundary and find the cart only moves in reverse until it’s back inside your store’s boundary.

We’re changing the story with SmartTrack:

- No buried lines, wires, transmitters or monthly fees
- Customized at our factory to each store layout
- Retrofitting available on Amigo carts

Protect carts from being stolen
The two-sided charging sign helps customers choose the Amigo that is charged and ready for use. Nice.

How many times do you plug in the cord and not realize the outlet isn’t working? With a lighted plug, associates know immediately whether there’s a working connection.

When a ground pin breaks off in the outlet, you need an electrician. To prevent damage to the outlet and preserve the AC cord, add the OutRight outlet cover.

We’re not your average duck... we’re determined to lower service costs. The number one service cost for motorized equipment is the battery. The first and most important step is to choose the right battery for the application—we can help with this.

But many things can impact battery life. Lack of charging due to damaged AC cords, failure to plug in carts and even a damaged outlet can shorten the life of any battery.

In our quest to lower battery service costs, we’ve introduced progressive solutions:

Amigo® SmartSensor

Our Commitment

Amigo shopping carts have optimal safety features and feature a tight turning radius, but user error can equate to big messes or accidental collisions. Prevent this with SmartSensor, our collision avoidance system for motorized carts.
Amigo’s service program provides service for over 14,000 retail stores. We can be your full-time service coordinator or use us only when needed.

Self-Service
Amigo technicians provide support to help facility maintenance teams complete repairs on site, with the option to order new or recertified parts online.

Full-Service
Our network of technicians work directly with facility managers to diagnose repairs, then dispatch a service provider to complete repairs within five days or less. This proactive service program helps you to manage and identify the true costs of service and monitor when equipment should be replaced.

Many Brands
We service all brands of motorized shopping carts, wheelchairs, cart pushers, pallet jacks and more.
Our pace of innovation has led us down the path of moving more—moving more products in new spaces like warehouses, backrooms, distribution centers or for use picking product.

What’s smaller and more agile than the usual backroom equipment? These innovative carts are designed to go where other motorized equipment can’t and take wear and tear off employees.

Amigo motorized material handling carts can cruise through a standard doorway, turn in tight aisles and charge in a 110V outlet.

All Amigo products are designed and built in the U.S.A.
